It's been a long time since progress has been made. The wintertime did not allow me to prime parts and finally got into some kind of recession.

But we're back... stronger then ever :) So made some progress the last days and restarted work on the center fuselage.

Devinyled the cover plates.

Scuffed, prepped and primed the parts on the center fuselage. It took over 7 hours, only to prime. Either I'm becoming a bit rusty or there's just a lot of parts...

I guess it's a bit of both worlds.
