

Another rivetting session on the forward fuselage.

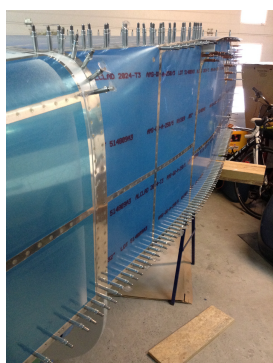

This time we knocked in the rest of the F705, baggage bulkheads F-722 and F-724s an both sides and most of the joint of aft and center fuselage.

Cindy in action with the 3x gun. She's getting good at timing which makes things a lot easier.

The joint of the forward and aft fuselage are really nice and thight.

view of the belly. Also here very nice joint.
